ID COMMENTS:

DISTRIBUTION: Please refer to the dot map.

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT: Generally associated with sandy habitats (Forbes, 1954) and nearly all of our records come from barrier islands. One historic record comes from the Sandhills and one recent record comes from the top of Mt. Jefferson, probably representing a migrant.

FOOD: Larvae are polyphagous, reportedly feeding on a wide range of herbaceous plants, including many crop species. Among the hosts listed by Tietz (1972) are cabbage, turnip, lettuce, tobacco, blackberry, tomato, dandelion, and corn. We do not have any feeding records in North Carolina.

OBSERVATION\_METHODS:

NATURAL HERITAGE PROGRAM RANKS: G5 SNR [S2S3]

STATE PROTECTION: Has no legal protection, although permits are required to collect it on state parks and other public lands.

COMMENTS:
