

Anatrachyntis badia Florida Pink Scavenger Moth

FAMILY: Cosmopterigidae SUBFAMILY: Cosmopteriginae TRIBE:

TAXONOMIC_COMMENTS: Pyroderces is a genus of small comet moths that are primarily found in tropical, subtropical and warm temperate parts of the world. They are well represented in Australia and the Old World tropics, and there are three species in North America. Hodges (1978) placed our three species in the genus Pyroderces, but Europeans usually place these in the genus *Anatrachyntis*.

ID COMMENTS:

DISTRIBUTION: Please refer to the dot map.

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT:

FOOD: Hosts are poorly documented. Heppner (2007) reports that larvae feed on scale insects, but also lists elm, pine, and peach. It is unclear if the larvae were feeding on these plants, and we do not have any feeding records in North Carolina.
