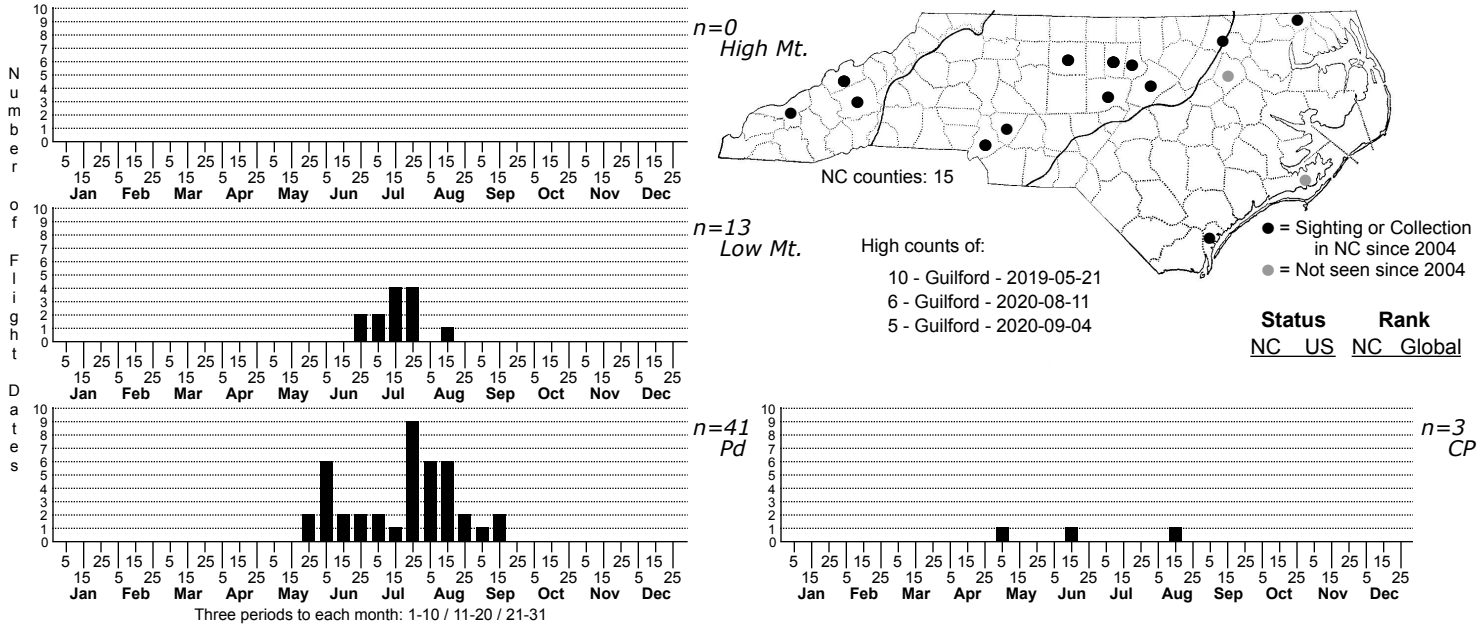
Dichomeris inversella Dichomeris Species Group



FAMILY: Gelechiidae SUBFAMILY: Dichomeridinae TRIBE: [Dichomeridini]
TAXONOMIC_COMMENTS:

FIELD GUIDE DESCRIPTIONS: Beadle and Leckie (2012)
ONLINE PHOTOS:
TECHNICAL DESCRIPTION, ADULTS: Hodges (1986)
TECHNICAL DESCRIPTION, IMMATURE STAGES:

ID COMMENTS:

DISTRIBUTION: Please refer to the dot map.

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT: Our records come mainly from residential areas. The few natural habitats include both riparian and upland areas. No xeric areas are included, unlike our records for D. kimballi.

FOOD: Larvae possibly feed on Pecans (Hodges, 1986). This information appears to come from the label on a single specimen from Edgecombe County, NC; Hodges was unsure whether it was actually reared on Pecan or whether the adult -- a worn specimen -- was collected on it.

OBSERVATION_METHODS:

NATURAL HERITAGE PROGRAM RANKS:

STATE PROTECTION: Has no legal protection, although permits are required to collect it on state parks and other public lands.

COMMENTS:
