ID COMMENTS:

DISTRIBUTION: Please refer to the dot map.

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT: Woodlands and Forests (Wagner, 2005). North Carolina records come from hardwood forests, ranging from Maritime Forests to Northern Hardwoods.

FOOD: Polyphagous, feeding on many hardwood trees and shrubs (Wagner, 2005). In swamp forests that are flooded during the winter, one of its natural control agents -- a Tachinid fly -- is greatly reduced and the populations of the moth can reach defoliating proportions. Water Tupelo is particularly heavily attacked, becoming stripped of leaves over 1000s of acres.

OBSERVATION_METHODS:

NATURAL HERITAGE PROGRAM RANKS: G5 S5

STATE PROTECTION: Has no legal protection, although permits are required to collect it on state parks and other public lands.

COMMENTS:
