TECHNICAL DESCRIPTION, ADULTS:

TECHNICAL DESCRIPTION, IMMATURE STAGES:

ID COMMENTS:

DISTRIBUTION: This species is primarily northern, particularly east of the Appalachians

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT:

FOOD: Reported hosts include poplar (<i>Populus</i>) and willow (<i>Salix</i>) (Wagner, 2005). We do not have any feeding records in North Carolina.

OBSERVATION_METHODS:

NATURAL HERITAGE PROGRAM RANKS: G5 SNR [S1?]

STATE PROTECTION:

COMMENTS: This species is currently known in North Carolina from a single high elevation site at the extreme northwest corner of the state. Although there are scattered patches of willows at that site, the location is well away from any significant riparian areas that are the most likely habitat for this species.
