TECHNICAL DESCRIPTION, IMMATURE STAGES:

ID COMMENTS:

DISTRIBUTION: Occurs essentially statewide in North Carolina, but is rare at higher elevations in the Mountains.

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT: This species has nearly the same range of habitats as *Tetanolita mynesalis*, from maritime dunes and other barrier island habitats to high elevation forests.

FOOD: Larvae have been reared on dead oak leaves but the natural hosts have not been determined in the field (Wagner et al., 2011).

OBSERVATION\_METHODS:

NATURAL HERITAGE PROGRAM RANKS: GNR SNR [S5]

STATE PROTECTION: Has no legal protection, although permits are required to collect it on state parks and other public lands.

COMMENTS:
