ID COMMENTS:

DISTRIBUTION: Please refer to the dot map.

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT: Our records come from floodplains where Cottonwoods are either common or that have been recorded from the area. We do not have records from other shoreline habitats where willows are common and cottonwoods are unlikely.

FOOD: Larvae reportedly feed primarily on aspens and poplars (*Populus* spp.), but also on willows (*Salix*) to some extent (Wagner et al., 2011). Reports from alder and birch require confirmation.
