ID COMMENTS:

DISTRIBUTION: Please refer to the dot map.

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT: Most of our records come from residential areas, probably in association with hops grown for home brewing. At least one record comes from a natural area with extensive non-riverine swamp forests, possibly indicating that other members of the Urticaceae can be used.

FOOD: Larvae feed on hops (Wagner et al., 2011). In North Carolina, we have found it feeding on Japanese Hops (*Humulus scandens*).

OBSERVATION_METHODS:

NATURAL HERITAGE PROGRAM RANKS: GNR SNR [SNA]

STATE PROTECTION: Has no legal protection, although permits are required to collect it on state parks and other public lands.

COMMENTS: This species is an introduction from Asia.
