FAMILY: Henicopidae SUBFAMILY: TRIBE:  
 TAXONOMIC\_COMMENTS:

FIELD GUIDE DESCRIPTIONS:  
 ONLINE PHOTOS:

ID COMMENTS: The Family Henicopidae is distinguished from other lithobiomorphs by the lack of spurs on the legs. The distal end of the tibia is extended into a spinous process. Zygethobius lacks a spiracle on the first leg-bearing segment, and has a pair of large ocelli. Zygethobius pontis is the only eastern species.

DISTRIBUTION: KY, OH, TN, VA, NC

HABITAT: Leaf litter
