

Calopteryx maculata Ebony Jewelwing

Sight (iNat) in 2024: Tyrrell

High counts of:
118 - Onslow - 2016-06-04
118 - Jones - 2016-06-04
98 - Buncombe - 2012-05-16

Earliest date: Hoke 2023-03-30
Latest date: Brunswick 1971-10-27

Status		Rank	
NC	US	NC	Global
-	-	S5	G5

DISTRIBUTION: Statewide, lacking records only in four far eastern counties, though likely present in all 100 counties.

ABUNDANCE: Very common (to locally abundant) across the state, except less numerous in the eastern Coastal Plain. Seemingly rare in counties surrounding Albemarle Sound, and perhaps absent on the Outer Banks. One of the most abundant odonates in the mountain province.

FLIGHT: Early April to late October in the Coastal Plain; late April or early May to early October in the Piedmont, and to late September in the mountains.

HABITAT: A wide variety of stream habitats, but most common along small forested streams.

BEHAVIOR: Where present, easily seen flitting slowly amid vegetation close to a stream, usually in shade or in small openings inside a forest.

COMMENTS: This is, by far, our most commonly seen member of the Family Calopterygidae (Broad-winged Damselflies), and it is also one of the most obvious and easily identified of all of our damselflies.
