

Milnesium n. species

FAMILY: Milnesiidae

TAXONOMIC COMMENTS: Probable new species from the Warren Wilson College campus appears to be the same species found in the Smokies. This species is now under active investigation by Bartels & Kaczmarek.

SPECIES COMMENTS: Terrestrial. Range unknown. DNA analysis of Buncombe County material has confirmed new species status of that population.

ID COMMENTS: Description in progress.

DISTRIBUTION: Please refer to the dot map.

HABITAT: Tree moss and lichen.

OBSERVATION METHODS: DIC, PC, SEM, and DNA analysis.
