

*Pseudechiniscus (Pseudechiniscus) n. species 1*

FAMILY: Echiniscidae

TAXONOMIC COMMENTS: This is a probable new species from the GSMNP. See *Pseudechiniscus suillus* species account for taxonomic details about this group.

SPECIES COMMENTS: Terrestrial. Fresh material is needed for a complete description. A resampling and reanalysis of all pseudechiniscids in the GSMNP would be fruitful.

ID COMMENTS: Further work is needed.

DISTRIBUTION: Please refer to the dot map.

HABITAT: Tree moss and lichen, and other terrestrial habitats.

OBSERVATION METHODS: DIC and PC.
